

Internal Audit Report

Organization: ABZ Technologies
Date of Audit: July 17, 2026
Lead Auditor: Aman Verasinghani
Audit Scope: ISO 27001 Clauses 4, 5, 6 and Annex A (A.5 - A.8)
Status: Draft

1. Executive Summary

An internal audit was conducted on July 17, 2026, to assess ABZ Technologies' compliance with the ISO/IEC 27001:2022 standard. The overall security posture is maturing well, with strong management commitment and robust technological controls deployed for remote development environments (including AI frameworks like OpenClaw and Cursor). However, minor gaps were identified in documentation formalization.

2. Audit Findings

Finding ID	Type	Description	Clause / Control
AUD-26-01	Minor Nonconformity	The Asset Inventory (ISMS-DOC-06-3) does not clearly define explicit physical owners for remote laptops located in Sunnyvale, listing only the broad 'IT Dept'.	A.5.9
AUD-26-02	Observation	The Incident Response Procedure is newly established; consider conducting a tabletop exercise to test response times for potential AI-agent misconfigurations.	A.5.24

3. Conclusion & Next Steps

No major nonconformities were found. The identified minor nonconformity must be logged in the Continuous Improvement tracker, with corrective actions submitted by the IT Manager within 30 days. Management review is recommended to evaluate the readiness for external certification.
